

APPLICATION INSTRUCTIONS FOR REAR NUMBER PLATE SECTION

This fit does take some patients.

Instructions:

1. Remove Number plate and rear lights this makes fitting so much easier.
2. Spray the area on the car with some soapy water or rapid tac application fluid.
3. Peel backing sheet away from vinyl. We have cut the space for your number plate foam pad the vinyl has been left in its place for transport purposes.
4. Position your sticker in place, the soapy water will allow you to move your graphics until you have it in the correct place.
5. Once you're happy with the positioning, with a squeegee start applying some pressure to the sticker from the middle outwards to remove the soapy water. Remember to keep an eye on the alignment of your sticker.
6. Run the squeegee along your sticker a few more times with more pressure to achieve strong adhesion.
7. If any air bubbles appear, you can pierce the edge with a needle and force the air or liquid out with your finger and that's it, you're all done.

We recommend that you do not drive your car for 2 - 4 hours after installing your graphics. This will vary depending on the outside temperature.
