

## General Application Guide

When fitting your vinyl graphics, following the guidelines below can offer a more professional and better looking result. Please read all of the instructions before commencing fitting.

NOTE: Creasing/bubbling may be present in the protective/application paper. This is a normal result of the protection and packing process of the decal. Although it may appear otherwise the vinyl should not be affected.

It is strongly recommended that:

- Installation is conducted using the wet application method. This gives the fitter much more flexibility when applying.
- The vehicle is thoroughly washed before application using warm soapy water. To remove any road debris (tar/insects/grease etc) Autoglym Tar & Adhesive Remover is a very good cleaning agent. If this is used, wash over again with soapy water and ensure the bodywork is completely dry. Also ensure the bodywork is free from wax and polish.

### Required Application Equipment

In order to make application as easy as possible, the following equipment should be used:

- Suitable vehicle cleaning products/lint free cloths
- Spray Bottle filled with water/non corrosive detergent solution. Approx. 50 parts water to 1 part detergent.
- Ruler/straight edge
- Vinyl applicator squeegee
- Sharp scaple type knife
- Masking Tape
- Sheet Slitter/Scissors
